**Passage 2**

Research show that most online users prefer staying connected with smartphones to personal computers as the internet connectivity facilitating users going online is increasing. More usage of mobile phones approximately 3.5 times as that of personal computers with handheld technology offers more services than initially developed. China, for example, ever categorized in the U.N.'s 2005 statistics report as a country failing to produce a whole generation of personal computers due to only 10% of its population was Internet friendly, has ventured into smartphones resulting in around 1 billion people accessing to the Internet using smartphones.

It seems almost everyone chooses Android operating system to run their smartphones. An android is an open-source software for mobile devices that comprises an operating system, middleware, and critical applications. Since the software platform was launched, it has undergone multiple improvements in various dimensions, such as features and compatible hardware, to improve users' experience. In addition, the software platform had also extended to other types of devices apart from the mobile ones it targeted when it entered the market by launching a mobile platform. It runs multiple applications that allow users to choose among the wide range of applications and their carriers as an operating system.

The use of Android operating system for running a smartphone has become a familiar pattern in many countries globally. The iPhone was indeed launched first, yet Android coming later has grabbed the highest number of users and contributed to making the smartphone a primary tool for almost everybody. In other words, despite Apple being successful in market, Android-run smartphones have been more purchased. In China, 9 out of 10 of smartphone users have purchased Android gadgets. Likewise, research in India reveals that 99% Android phones have been sold of all smartphones in the country.

Currently, Android still catches significant attention in the mobile industry and other industries due to its open-source nature and architectural model. Based on the Linux kernel architectural model, the Android platform consisting of several layers offers a complete software stack.
